Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2834

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iten or

Lazarus in view of Dvorsky or Crawley.

Iten (figs. 1, 2, & 6) and Lazarus (fig. 2A-C) teach an electroded piezo element laminated between insulating sheets with lead electrodes thereon and a spaces layer. They do not explicitly use a fiber reinforced insulator or some of the particular electrode materials claimed. However, both Dvorsky and Crawley teach using fiber reinforced insulating encapsulation materials to increase the strength of piezoelectric transducers. The specific wire mesh and woven fabric electrode materials are known per se (official notice taken). Since it has long been held that selection from among known suitable materials is within the skill expected of the routineer, use of these specific materials based on their known attributes would have been obvious to one of ordinary skill in the art.
